THE COIL HANDLING SOLUTIONS YOU NEED TO MAXIMIZE EFFICIENCY & MINIMIZE WASTE.

SWI's Reliable, Fast & Easy-To-Operate
Systems Ramp Up Any Sheet Metal Project.

Marxman Pro

The Marxman Pro is one of the most advanced sheet metal blanking systems on the market. **Automatic knife setup and auto nesting** ensure all jobs are processed quickly and with minimal material waste. Plus, with the Pro's part cut system, you can part cut ANY slit, even in the middle of a sheet, with no damage to adjacent parts. Or, when all parts are the same length, simply use the guillotine shear to cut them all to length.

The Marxman Pro also comes standard with an **automatic labeling system**, which applies custom printed barcodes to each part, allowing you to move, scan, and load projects between slitter and folder with minimal downtime and reduced risk of operator error.

SWI Marxman Pro
Automatic Slitter

Twin Mandrel Capstan Uncoilers

These rugged uncoilers (available in capacities of 12,000lbs and 5,000lbs) have the capability of safely loading or unloading one coil while running a job on another and quickly switching between the two to maximize production time.

We've been manufacturing our Twin Mandrel Uncoilers for more than 20 years, with many in high-volume, double-shift operations. Another amazing perk is that they can be paired with any preexisting rollforming machines your business already utilizes making them the perfect economical solution where fast coil changeover is required with minimal fuss.

EDITOR'S NOTE

BY DAN BROWNELL

Building on Success

I would like to introduce myself as your new editor. I consider it a privilege and look forward to continuing *Rural Builder's* tradition of delivering practical, timely information to help you save time and money and to improve your bottom line.

POST-FRAME BUILDER SHOW IN BRANSON

You don't want to miss this opportunity to meet manufacturer reps and see their newest products in person. And, of course, there's the networking and educational opportunities as well. Industry experts will be there to present seminars on key topics. All this will take place June 19-20 in beautiful, family-friendly Branson, Missouri. Check out the in-depth information on the show inside this issue. Make plans now to bring your family and make it a working vacation. Reservations are filling fast, so don't wait.

AUGUST SOURCE BOOK SUBMISSIONS

We would like to invite you to submit projects for our August Source Book issue. If you haven't submitted one yet, here's the

link: shieldwallmedia.com/rural-builder-source-book-project-submission-form. Or click on the link on the *Rural Builder* website.

We're also accepting submissions for each issue's Project of the Month. These projects are a great way to get the word out about your company, and an excellent source for ideas and inspiration for our readers. Just upload some high-resolution photos, tell us briefly about the project, and list the key manufacturers and products you used. Use the same submission link above.

ARTICLE TOPIC SUGGESTIONS WELCOME

We want to cover the topics and information you find most important. Feel free to send me an email with your ideas, suggestions, and feedback to dan@shieldwallmedia.com. If you would like your company to be considered for a business profile article, let me know that as well. We look forward to hearing from you.

To Your Success!

Dan Brownell, Editor

Barndominium Design With SmartBuild

The market is changing. Your customers demand more. They are fickle. They expect instant information. They rapidly change their minds and expect quick responses. To compete in this landscape, you'll need to turn around bids faster. You'll need to provide accurate quotes LIVE in the field.

3.5 hours → 15 minutes

Standard post frame designs that once took 3 1/2 hours, can now be completed in 15 minutes.

10 hours → 30 minutes

Barndominium designs that once took 10 hours, can now be completed in 30 minutes.

GET YOUR UNFAIR SHARE OF
THE BARNDOMINIUM MARKET.

Scholarship Winner Got the Career of His Dreams

Miguel Gomez' Unbeatable Attitude Made it Happen

BY LINDA SCHMID

When you meet Miguel Gomez and talk to him about his work, you can't help but smile. His enthusiasm is infectious. He is doing what he always dreamed of doing; working as a plumber.

That may seem like an unusual dream to many young people, after all so many are told that they should focus on getting into college so they won't have to do trade work. Miguel said that people told him that too, but he ignored it.

Miguel was always curious about how things worked. When he was small he wondered why the shower water got hotter when someone flushed the toilet. When a repairman came, he followed him around like a puppy asking questions.

WORKING TOWARD A GOAL

As he got older, his uncle, a plumber, took him under his wing. From sixth grade through high school, he worked for his uncle's shop, Molina's Plumbing. Eventually he could run some jobs himself.

In 2011, Miguel went to work for Bill Howe Plumbing, Heating & Air. The company encourages their employees to take classes at the trade school, even paying the tuition. A year or two later, Miguel started classes.

When his employer encouraged the students to apply for scholarships, Miguel applied for three or four of them. "It was difficult writing essays," Miguel said, "It brought up a lot of memories about my past. Growing up, we were poor, first generation Mex-

ican-Americans, and we had a hard time of it."

EARNING A MIKEROVEWORKS SCHOLARSHIP

Until he applied for the scholarship, Miguel had never even heard of Mike Rowe because he had never watched much television; he always worked. However, when he decided to apply, he watched a few reruns of "Dirty Jobs," and he thought it was so important that Mike was showing everyone what tradespeople's jobs are about.

"It's wonderful that he is getting the word out that there are lots of opportunities out there besides sitting at a desk," Miguel said.

Awarded a mikeroweWORKS scholarship that paid for his textbooks gained him recognition at work, as such inputs help his employer to continue educating employees.

Part of the scholarship process requires Miguel to take the Foundation's Sweat Pledge. The pledge tallied with his outlook, but his favorite part was the statement that everyone is created equal. Miguel knows this to be true, although he has not always been treated equally.

FURTHERING HIS EDUCATION

The first couple of years of trade school were pretty easy for Miguel; he already knew the basics. Then, he moved into sizing and all of the calculations involved with that part of the job, and it became more challenging. But he persevered and earned his journeyman's certificate. Miguel is very proud of this accomplishment.

As a result of a collaboration with mikeroweWORKS Foundation (www.mikeroweworks.org), *Rural Builder* is featuring profiles of Work Ethic Scholarship recipients in each of its issues. Over 1,500 scholarships have been awarded to trade-school students who value hard work and taking personal responsibility. *Rural Builder* applauds these students and wants to acknowledge their choice to apply their talents to skilled trades. Thank you, mikeroweWORKS Foundation, for your continuing efforts to close the skills gap and "reconnect the average American with the value of a skilled workforce."

“As a first-generation American, I have planted my flag and become the person my uncle said I could: a journeyman plumber with a contractor’s license.

“People tried to put my decision down,” Miguel said. “They said I should go to school to become a lawyer. But that doesn’t work for me; I like to be up and active.”

ON THE JOB

People also harassed him because of his skin color. They would make comments like “You look more like a landscaper.”

“I’m comfortable in my skin,” Miguel said. “You can say stuff about me and I’ll still fix your plumbing problem,” he added.

If it gets too tense, Miguel knows he can call the office and ask for someone else to come out. The few times he’s done that, he found that his employer had his back. They told the customer, “We don’t want your business if you can’t treat our people with respect.”

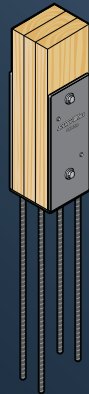

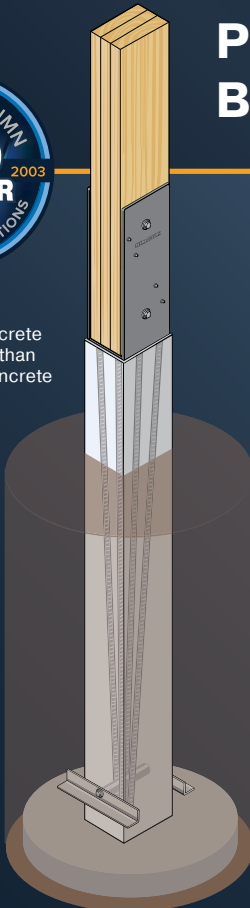

You might think that such incidences could dampen Miguel’s enthusiasm for his work, but it’s not so. He loves his work and believes it has made him a better person. “Look at me now,” he said, “I started as no one, and now I am a manager,” he added.

Miguel trains the next generation of Bill Howe employees. He is glad to share all of the knowledge he has been given with others learning the trade. He is not sure what the future will bring, but he said, “I enjoy training young people to be better in their jobs and in their lives. I think I can be happy doing this forever.” **RB**

Team Rubicon: Helping People in Crisis

Working Toward More Resilient Communities

You may have heard of Team Rubicon, a humanitarian organization with local volunteers, or Greyshirts as they call them, in every state. The organization has grown from its inception 14 years ago when Jacob Wood, a Marine, pitched in to help Haiti after the 2010 hurricane that devastated the island. He met eight other volunteers during this mission, and they banded together to start a volunteer organization. Today Team Rubicon includes 160,000 Greyshirts. Once you find out a bit about Team Rubicon, you will understand how they manage to recruit so many volunteers!

TEAM GOALS

Devon Miller, Sr. Communications Associate, explained that Team Rubicon engages in three phases of relief: mitigation, response, and recovery. Response is the part of their work that people are likely to hear about; it's the part that the media reports on, but all three phases are important.

Mitigation is about helping people to become prepared and even avoid problems when disasters strike. For example, clearing away the brush and flammable items from yards where wildfires are a threat and sandbagging in areas that suffer from flooding.

Response is about showing up when disaster strikes and doing what needs to be done. This often means clearing the route so first responders can get to the people

Hawaii Donations Management

who need attention and organizing volunteers.

Recovery is about helping people get back into their homes. Sometimes that entails repairs and sometimes that requires rebuilding. The organization employs local tradespeople for these projects with the mindset that the money spent is invested into the local economy.

DOMESTIC & INTERNATIONAL SERVICES

The goal of the domestic services is to develop a bank of volunteers across the US that can jump into action when needed.

Local volunteers who know the area and work to develop connections with local leaders and communities is invaluable. In times of crisis, they can help the team to find the areas where they are most needed, as well as helping them with places to shelter. Besides the local people, they have about 40,000 Greyshirts who will deploy to crisis areas as needed.

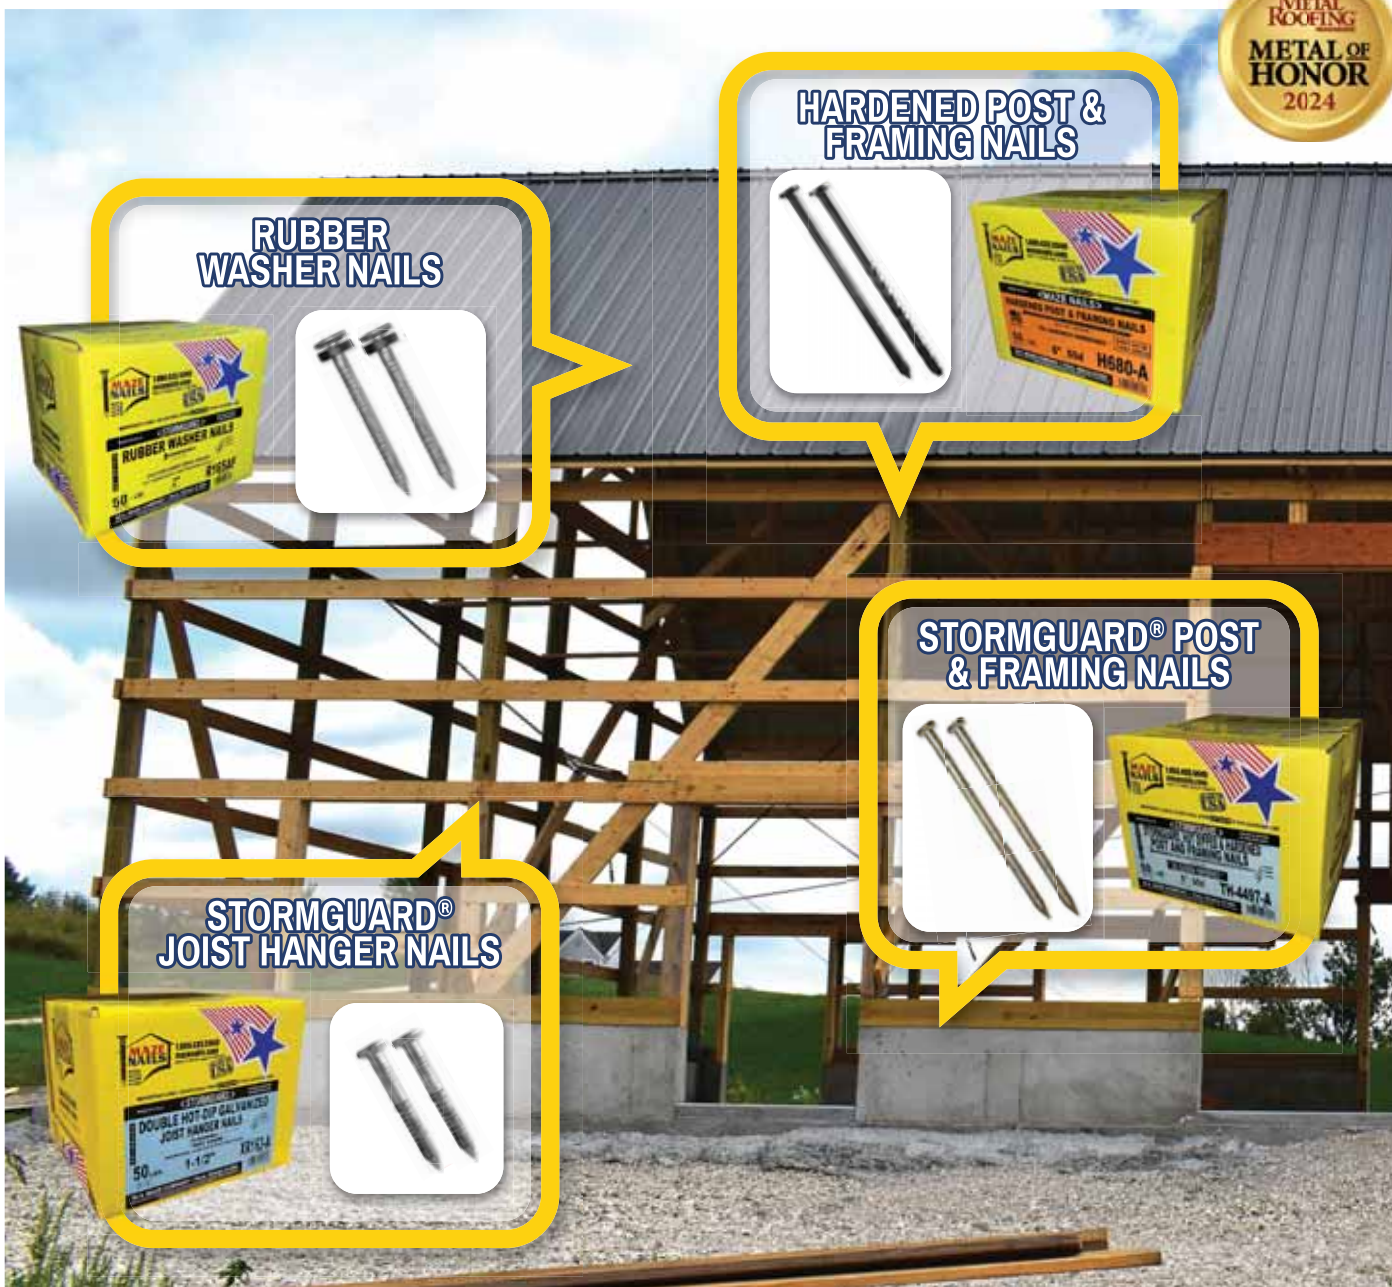

The International operation has many of the same goals as the domestic team, but there is greater focus on medical services, water, and hygiene. This is because these items are often scarce in the environment even before the disaster or crisis

hit. Team Rubicon deploys mobile medical units, type 1, which means they are small and able to reach remote areas, and they are self-sustaining so the volunteers are not using resources that the locals need.

TEAM RUBICON IN HAWAII

Team Rubicon was fortunate enough to be part of the initial response to the recent, devastating wildfires on Maui. Erin O'Rourke, Operations Manager, said they operated in the up-country region of Kula, which was hit by the same fire that did so much damage in Lahaina. Their operation consisted of clearing the access route to the area, managing local volunteers, and handling the donations that came in. Post-disaster work is continuing in the region.

THE VETERAN CONNECTION

With labor shortages what they are, especially in hands-on work like the trades, one might think that it would be hard to find workers and volunteers to fulfill the team's mission. One great resource is veterans.

The organization was developed by a veteran, and O'Rourke

said, "We have found that military people are especially suited to do this work. They have the grit and determination we need."

She explained that their volunteer activities depend on what is needed in each individual case, but often Greyshirts use power saws to cut up trees and remove them from the access route and perform other manual labor. They work in grim circumstances and may be subjected to stark living conditions, and these are things that veterans have generally experienced before.

"Working with Team Rubicon often gives veterans a sense of purpose that they may be missing after they leave the service," O'Rourke said.

Miller estimates that about half of their volunteers are veterans. Training is provided to Greyshirts for such things as using power tools and leadership training, and some veterans have taken the skills they have developed with the organization and found employment opportunities, such as firefighting, working for FEMA, or as EMTs.

THE TRADES ACADEMY

Team Rubicon is working on a new initiative; they are developing a Trades Academy. The mission is to train people in skills

JANUS
INTERNATIONAL GROUP

WE GOAT THIS.

No one beats Janus doors – ya' herd?

Selecting a Janus roll-up door for your building makes you the **G.O.A.T.** of decision-making. Our American-made doors outlast the competition, saving you money on costly repairs and maintenance. Spiral barrels and tension holding devices provide superior strength, meaning you get the toughest, most reliable doors around.

Janus roll-up doors are **UDDERLY AMAZING** and will **BALE YOU OUT EVERY TIME**.

Volunteers in Action

such as carpentry, HVAC, and electrical work so they will be able to better help with recovery, getting people back in their homes.

The Academy's goal is to provide tuition-free training with the help of generous sponsors and partners like the A. James & Alice B. Clark Foundation. The academy will be open to all, as O'Rourke said, it's for "people who want to give their time and make the world a better place."

SUPPORTING THE MISSION

During a natural disaster, war, or a pandemic, people need many things. Miller quoted founder, Jake Wood, "There are a thousand things that are more important than money, and all of them cost money."

The team needs funds and volunteers, or "kick-ass civilians" who are willing to help, so they can continue coming to the aid of people in need across the country and the globe. If you would like to support Team Rubicon, visit teamrubiconusa.org/give. **RB**

POST-FRAME BUILDERS SHOW

June 19-20

Shield Wall Media Shows Specialize In Connecting Buyers & Sellers

If your company offers or builds post-frame structures, or you are considering expanding into post-frame buildings, you need to plan to attend the Post-Frame Builder Show in Branson, Missouri, June 19-20.

Produced by Shield Wall Media, the Post-Frame Builder Show offers educational sessions, a robust expo hall filled with post-frame material and service providers, and opportunities to meet one-on-one with construction industry insiders. This family-friendly event is the company's third construction-focused trade show as it joins the Construction Rollforming Show and the Garage, Shed & Carport Builder Show.

The Post-Frame Builder Show, like the other Shield Wall Media shows, is strictly a business-to-business event. Exhibitors can expect attendees to be decision makers for their companies and attendees can expect that exhibitors are dedicated to spending the time needed to help them make their buying decisions. While all industry professionals are welcome, Shield Wall events focus on connecting those who ultimately make business happen on the show floor.

"Many shows try to be everything for everyone and see the number of bodies on the expo floor as success," said Shield Wall

Exhibitors are dedicated to spending the time needed to help attendees make their buying decisions.

The Post-Frame Builder Show will take place at the Branson Convention Center, June 19-20.

Media Publisher and CEO Gary Reichert. "We know our audience and we know what we want to deliver. Our goal is a qualified audience so we can connect exhibitors and the decision-makers who want to do business with them."

WHAT YOU'LL FIND

Shield Wall Media's trade shows span two days, which is shorter than a typical trade show. "We keep it simple and business-oriented," Reichert said. "If you are looking for a supplier, it doesn't take three days. Our exhibit hours are Wednesday and Thursday so you can get in, do business, and still spend your weekend with your family."

Post-Frame Builder Show attendees can expect to find equipment manufacturers, component suppliers, and technology innovators. Some of them — such as Boss Hammer Co. — will be hosting demonstrations in their booths. The scope of exhibitors is limited to only those relevant to the post-frame building industry. Don't expect to find cutlery retailers, timeshare peddlers, or booths selling floor polishers.

NEW PRODUCTS

Many exhibitors are debuting new products for post-frame construction at the Branson trade show. Plyco is introducing the new Designer Series program and new Klick-Fit trim system. The Designer Series provides 16 new color options within the heavy duty 20 and thermal break 92 door series. In addition, specific to the 92 series, a new residential look 5068 sidelite door is now available. Many types of glass and hardware selections make the Designer series the next generation of a premium door system. Finally, the Klick-Fit trim system for these doors and Plyco windows is an aluminum two-piece 3 ½” finish J type trim to add a beautiful finish trim to your doors and windows.

See the Auger-Lite Pro in the Bucket Bunker booth.
PHOTO COURTESY OF BUCKET BUNKER.

Bucket Bunker®, which manufactures its product line in Kansas and Indiana, is exhibiting its new Auger-Lite Pro™ (U.S. Patent Pending). It is a load-and-go solution for handling and transporting multiple skid steer attachments. This newest model is specifically designed with the post-frame contractor in mind. The challenge of moving multiple attachments from jobsite to jobsite is simplified by organizing tools and attachments into a single, portable unit. It is designed to manage one hydraulic auger drive head, up to three auger bits, a set of pallet forks, and a single skid steer bucket. Additionally, it can be moved with a bucket as well as standard pallet forks. Every unit is constructed of steel tubing and ¼” plate, and is powder coated for durability.

Levi's Building Components will be showing its new CoVent Exhaust Fan Vent. Ideal for interior exhaust fans equipped with a 3” or 4” flex hose, it is an all-in-one exhaust fan vent designed for metal roofs and intended for bathroom and attic venting.

AJ Manufacturing released two new products in March; they will both be on display at the Post-Frame Builder Show. The company is exhibiting its new insulation dam kit (patent pending). The easily installed kit is made of G-90 Galvanized 24-ga. Steel and is designed to manage up to R-60 of blown cellulose or fiberglass batt insulation. AJ Manufacturing is also showing its

The industry's first patented precast concrete skirt board brought to you by Perma-Column. PHOTO COURTESY OF PERMA-COLUMN

Learn more about the Amarr Northwoods Modern Plank Garage Door at the Delden Garage Doors booth. PHOTO COURTESY OF DELDEN.

new, more energy-efficient ceiling access doors. They feature a self-flashing frame fabricated of commercial-quality painted aluminum extrusions, miter cut corners, and assembled with screws. The 6”-thick door panel is designed to accommodate up to an R-42 insulation thickness, while the 4” thick door panel will accommodate up to R-28. Both are available in single- and bi-fold panel designs.

Perma-Column has devised yet another permanent problem solver for post-frame builders: the industry's first patented precast concrete skirt board that will never rot or warp. The precast skirt boards feature a 4” concrete base secured to wood with stainless-steel shear studs. Non-rusting basalt composite rebar runs the length of the precast concrete for further strength and stability.

Delden Garage Doors is showing off its new Quick-Stock program offering custom-packaged garage doors. They will also

She's Got Your Eyes, and Someday, She'll Inherit Your Roof.

Remarkably Strong. Surprisingly Lightweight. GALVALUME® Steel Sheet.

For projects requiring the strength and durability of steel, and the all-weather corrosion resistance of a zinc and aluminum coating, ask for GALVALUME® steel sheet. SDI's Acrylic and Painted GALVALUME® sheet set the industry standards for residential, commercial, agricultural, and architectural projects. Available in acrylic and a rainbow of paint colors, and in widths up to 72", GALVALUME® steel sheet is ideal for an endless variety of applications, including:

Roofs

- Standing-Seam
- Tuff-Rib
- R-Panel
- Ag Panel

Siding

- Standing-Seam
- Board & Batten
- Box Rib
- All Purpose

Garage Doors

- Roll-Up
- Sectional
- Hinged
- Slide-to-Side

In addition to serving as North America's largest supplier of GALVALUME® steel sheet, every product the SDI Flat Roll Group produces uses up to 80% recycled steel. This makes GALVALUME® sheet a great choice for green building projects. **GALVALUME® is the only aluminum/zinc coating for steel sheet backed by over 70 years of trusted performance.**

Give your next project a proven advantage—ask for GALVALUME® steel sheet by name. Contact your Steel Dynamics representative to learn more.

be showing the new Amarr Northwoods door, which features printed horizontal plank designs on a ribbed section that creates depth, texture, and subtle dimension and is “A perfect complement to modern, mid-century modern, and traditional architectural styles.”

Window manufacturer WinTech is displaying its newest premium windows: OzarkView. “WinTech’s OzarkView windows feature fusion welded mainframes and sashes, composite-reinforced interlocking meeting rails, and performance insulated glass. They are suitable for your residential and commercial applications.

Randy Chaffee of Source One Marketing will share his insights on relationship building and sales.

EDUCATIONAL SESSIONS

The Post-Frame Builder Show educational programming emphasizes topics you, as a decision-maker, want to see. Programming focuses on how you can make your business more successful by providing you with the assets you can use to do that. Those assets include connecting attendees with product and service providers, offering insights on best business practices and building efficiencies, and how to reduce costs and increase profit margins. Specific topics include, but are not limited to:

Condensation is a concern for all metal buildings in which the environment is not controlled. To explain why and what can be done about it, Dripstop’s Orion Ewell will lead a session on condensation control. In the business building track, Joel M. Oney, owner of J Money, has spent 25 years in the banking sector. He will lead a session on financing and payment options. Industry veteran Randy Chaffee, Source One Marketing, will be sharing some of the knowledge gained throughout his successful, decades-long career in relationship building and sales. (He will also be doing live podcasts throughout the show). And Shield Wall Media will teach attendees about free editorial opportunities and earned media in its presentation “How To Get Free Press Coverage.” Also on the docket are foundation solutions for different soil compositions and diversifying a product line. (Please note: Topics and presenters are subject to change.)

General admission is \$50. If you have relationships with exhibitors, contact them; they have an unlimited number of FREE guest passes and will gladly provide you with free admission. These passes include educational programming and are good for manufacturers, contractors, support staff, or anyone else.

Dolly Parton’s Stampede Dinner Attraction.

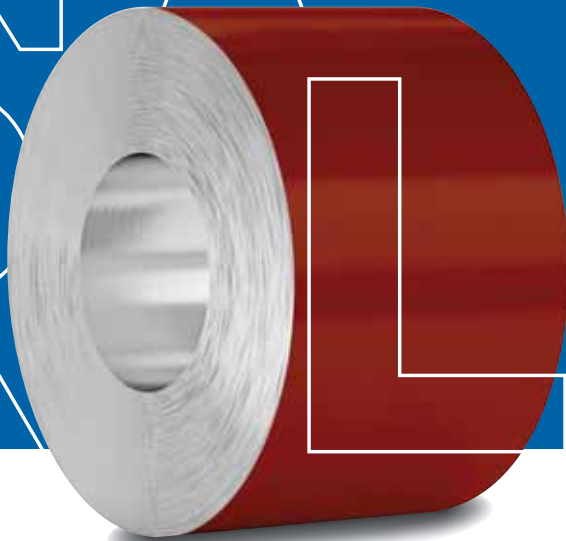

Branson Ferris Wheel.

Shield Wall Media keeps its shows simple and business-oriented. If you are looking for a supplier, it doesn’t take three days. Exhibit hall hours are Wednesday and Thursday so you can get in, do business, and still spend the weekend with your family whether that means heading home to them or bringing them along to this popular family vacation destination. See page 20 for a few ideas about how you can make the most of a trip to Branson.

Shield Wall Media is proud to be a family-focused company. The Post Frame Builder Show welcomes families and has dedicated areas for those with children to take time to rest, regroup, and maybe build a block tower or have a snack.

If you’re looking for new products, business opportunities, or different sources for products you already use, you can’t afford to miss the Post-Frame Builder Show June 19-20 at the Branson Convention Center in Branson, Missouri. If you have any questions about the Show or would like to exhibit, contact Shield Wall Media Director of Events Missy Beyer at 920-216-3007 or missy@shieldwallmedia.com. **RB**

WE'RE ON A ROLL

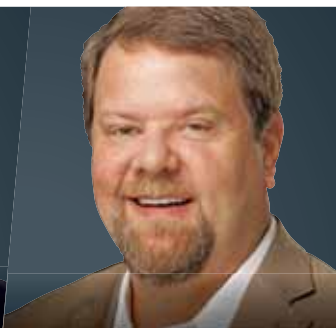

WE SPECIALIZE IN **PAINTED ALUMINUM COIL**

Like our coil, a relationship with Mid South is seamless and catered to your specifications. With over 25 years in the industry, we are painted aluminum coil experts down to our core.

Trust the specialists and let the good times roll.

MID SOUTH
ALUMINUM

FAMILY FUN IN

BRANSON

MISSOURI!

LET'S EAT!

Farmhouse Restaurant

Good old homestyle chicken, biscuits and gravy, and more...
119 Main St, Branson (Approx. .2 miles from the convention center)

Branson Cafe

Traditional fare is what you'll find here; they have been in operation since 1910 in the historic downtown! Breakfast, sandwiches, chicken, fish, steak, meatloaf, desserts, and more. 120 W. Main Street (Approx. .2 miles from convention center)

Mellow Mushroom (ride the trolley)

This fun pizza place claims to make the best pizza in Branson! They also serve up munchies, greens, calzones and burgers, all in a fun and fantastically themed dining room. Gluten-free and vegan options available. 333 Branson Landing (approximately .8 miles from the convention center)

Paula Deen's Family Kitchen (ride the trolley)

Paula Deen is known for her Southern style menu including fried chicken, pot roast, chicken and dumplings, ribs, with corn on the cob, and mac & cheese among the sides. Kids' portions available. 545 Branson Landing (Approx. .5 miles from convention center.)

Cakes & Cream Café & Drive-In

Enjoy burgers, pizza, ice cream sundaes, and more while watching classic flicks, cartoons and movies at a replica of the old-time drive-in theaters that are no more. Then play mini-golf! 2805 W. 76 Country Boulevard (Approx. 3.5 miles from convention center.)

Mel's Hard Luck Diner

In the style of an old-fashioned diner, you can order chili dogs, burgers, and plate specials, not to mention malts and ice cream. What sets this diner apart is the staff are professional performers who will sing to you while you eat! 2800 West Highway, W 76 Country Boulevard, Branson (Approx. 3.5 miles from the convention center)

Pasghetti's Restaurant & Attraction

Family-style Italian dining in a most fun and unique setting! Themed dining rooms are set in the 1930s in New York. A game room and the

World's Largest Fork and Meatball are some of the highlights. West 76 Country Boulevard (Approx. 3.9 miles from convention center)

• See Branson Boardgame Cafe under What Should We Do?

HOW TO GET AROUND

Branson has very limited public transportation. The good news is that the Free Downtown Trolley, Sparky connects historic downtown Branson with Branson's Landing and the Branson Convention Center. It runs 9am -6pm, 7 days a week.

If you wish to travel beyond Sparky's route, there are car rentals, shuttles and taxis. Here are a few services you could try:

Jerry's Shuttle Service: 417-348-1419

Ride A WayZ Shuttle Service: 417-336-6789

Branson Taxi & Rideshare Concierge Services: 708-0471

WHAT SHOULD WE DO?

Branson Boardgame Café

Technically a restaurant, the big draw is Dozens...no Hundreds of games from classics like Apples to Apples to Mysterium (mystery solving) or even Hungry Hungry Hippos. Sandwiches include the Candy Landwich Meal featuring pb & j. Slushies, coffees, and frappuccinos are available to enjoy between Pictionary sketches. 103 S Business Hwy 65 (Approx. .1 mile from convention center)

Main Street Pops

Ice cream pops you can customize by choosing a flavor, a dip, and a dusting! Dairy-free options available. 110 E. Main Street (Approx. .1 mile from convention center)

Dick's 5 & 10

"it's just like old times!" That's Dick's 5 & 10 tagline. Dick's has unique gifts, one-of-a-kind hobby collections including arrowheads and trains, plus toys from yesteryear, home items, games, hobby supplies, sewing notions, and more. There is something for everyone at Dick's! 103 W. Main Street (Approx. .3 mile from convention center)

Mr. B's Ice Cream Parlor

Serves up old fashioned ice cream and handcrafted sandwiches! 102 S. Business 65, Branson, MO 65616 (Approx. .2 mile from convention center)

Centennial Museum

This is a great place to learn a bit about Branson, the history, culture, and how it became a music hub. Free entrance. 120 S. Commercial Street, Branson (Approx. .2 mile from convention center)

Branson Scenic Railway (ride the trolley)

Climb aboard a vintage passenger train at the historic 1905 depot. Each car

is uniquely decorated and the scenery through the foothills of the Ozark Mountains is beautiful! Choose from a 45 minute daytime trip or a dinner excursion. Reservations required. *The intersection of Main Street and Branson Landing Boulevard. 800-2-Train-2, reservations@bransontrain.com*

Queen Esther Biblical Show

This Bible story is brought to life in a spectacular way with live animals, lovely settings, and an inspiring message! *Sight & Sound Theaters, 1001 Shepherd of the Hills Expy (approx. 4.2 miles from convention center)*

The Branson Craft Mall

This mall features crafts and artisans in action, creating their works before your eyes. Artisans include basket weavers, silversmiths, potters, engravers and carvers, plus clothing, bead and stained-glass artists. Custom orders may be available. *694 Historic Highway 165 (Approx. 4.5 miles from convention center)*

NIGHTLIFE IN BRANSON

FINE DINING

Level 2 Steakhouse

This steakhouse boasts world-class service and cocktails. They serve Kansas City 28 day aged Certified Hereford Beef and seafood specialties. The location can't be beat: *Hilton Branson Convention Center Hotel Second Level Concourse.*

Cantina Laredo

All the classics plus a few savory surprises such as shrimp with poblano pepper and fire-charred skirt steak. A full selection of Mexican cocktails with Happy Hour specials from 4-7. *1001 Branson Landing (Approx. .2 miles from convention center)*

Shogun Japanese Steak & Sushi

Enjoy hibachi dinners of steak, chicken, seafood, and more! Or select from a mouthwatering selection of sushi. *3265 Falls Parkway (Approx. 4.7 miles from convention center)*

Chateau on the Lake Resort & Spa

Award-winning cuisine in elegant surroundings can only be topped by the views of Table Rock Lake from the patio. Live piano entertainment accompanies your meal on Friday and Saturday nights. *415 N. State Hwy 265 (Approx. 8.9 miles from convention center)*

Buffalo Bar at Top of the Rock

On the lower level of Osage Restaurant (offering upscale regional cuisine) this pub features a stone patio with breathtaking views of the Ozark Hills. *150 Top of the Rock Road, Ridgedale (Approx. 10.4 miles from convention center)*

PUBS & NIGHTCLUBS

Landshark Bar & Grill

A waterfront restaurant and bar with views of Lake Taneycomo and The Fountains at Branson Landing. Indoor and outdoor seating with fire pits and American beach style offerings including burgers and sandwiches, seafood, and more. *915 Branson Landing (Approx. .2 miles from convention center)*

The Paddlewheel

A low-key good time, the Paddlewheel offers draft brews, cocktails, outdoor seating, fire pits, a big screen TV and, sometimes, live entertainment. *9 S N Boardwalk (Approx. .6 miles from convention center)*

Andy B's Tiki Bar

This Hawaiian style open air bar invites you to mix up your own classic or be adventurous and discover a new one. *433 Promenade Way (Approx. .8 miles from convention center)*

Wranglers Star Studded Honky-Tonk

From classic to modern, this is your place for country music! Live music and dancing from 5pm to 8pm. *625 State Highway 165 (Approx. 4.4 miles from convention center) 417-544-1405, https://wranglershonkytonk.com/*

Crazy Craig's Cheeky Monkey Bar

Looking for a place to party? Crazy Craig's has a live band or DJ nearly every night. Enjoy the dance floor, pool tables (free during happy hour from noon to 6pm Monday through Friday), darts, and electronic games. Barbeque, burgers, and bites served. *120 Montgomery Drive (Approx. 7.3 miles from convention center)*

SHOWS

Legends in Concert

Tributes to various music legends are the entertainment. The lineup is: Elvis, The Beatles, and The Blues Brothers. Shows run every day except Wednesdays. Check the website for tickets. *1600 W Highway 76 Country Blvd (Approx. 2 miles from convention center) legendsinconcert.com*

The Haygoods

Twenty instruments, state-of-the-art sound and special effects, a great sense of humor, and six siblings create a musical show that packs the house every night. *3216 W 76 Country Blvd (Approx. 4 miles from convention center) 1-800-785-1610. RB*

Dinosaur Museum

Life-sized dinosaur replicas and information about their habits will take you back in time! Fossil exhibits, and documentary films deliver more educational fun. There's even a scavenger hunt! 3619 W 76 Country Boulevard (Approx. 5.2 miles from convention center)

World's Largest Toy Museum

From the colonial days to the good old days of your childhood, there are a million toys in this museum! It's a toy-riffic way to spend some time with your kids! 3609 W 76 Country Boulevard (Approx. 5.1 miles from convention center)

BRANSON LANDING FUN (ride the trolley)

Branson Landing Water & Fire Show

You won't want to miss the Fountain Show, a grand display of 120-foot

geysers and fire columns, and lights all set to music. 100 Branson Landing Boulevard

Parakeet Pete's Steampunk Balloon

This truly unique adventure gives the enjoyment of floating away in a balloon without leaving the steel structure in which it is encased. Enjoy beautiful views of Branson and Lake Taneycomo. Visitors of all ages can ride in the balloon, believed to be the only one of its kind in North America. 1113 Branson Landing

Shipwrecked Treasure Museum

This museum gives your kids the fun of a treasure hunt through exhibits, displays and interactive features! You'll see authentic artifacts from historical shipwrecks and more. 505 Branson Landing Boulevard

Material Choices in Livestock Buildings to Combat Corrosion

There are no perfect materials, but there are good material choices for each building situation. The interior of a livestock building needs to be hygienic, easy to clean, and durable. This is a really tall order for some parts of the building and presents a big challenge for a manufacturer that wants to make a good product that they can stand behind.

The interiors of livestock buildings are a unique environment

with some serious challenges that require careful material selection. Of particular concern in livestock buildings is corrosion because the inside of a livestock building will be exposed to some very corrosive conditions (salt, acid, and oxidation).

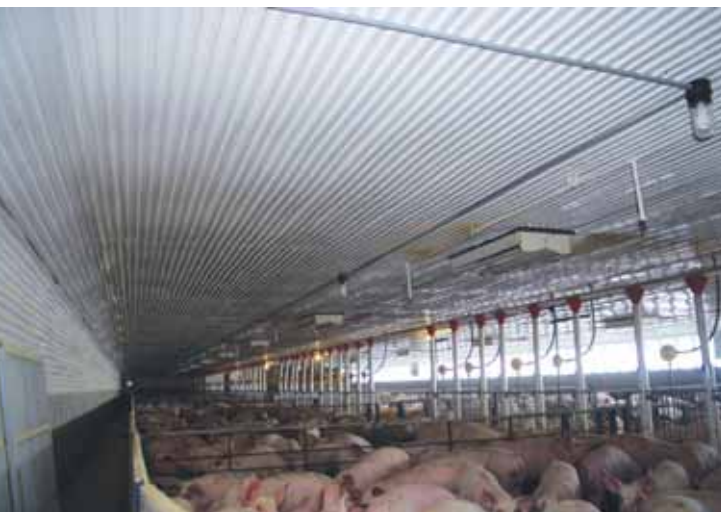

Metals, especially coated metals, can be great building materials in many environments, but they aren't always the best choice when the environment gets acidic, salty, or has a fluctuating redox potential. (An explanation follows if you aren't familiar.) Livestock manure and urine present the trifecta of tough environments for the use of metals, as the urine is acidic and salty and the manure is alive and thus the microbes in it are oxidizing carbon. When they run out of oxygen, they'll use nitrogen, iron, and sulfur instead. These environments can even lead to the formation of hydrogen sulfide, which will oxidize and make sulfuric acid.

While metals are often great building materials, they are susceptible to the action of acids and oxidation that we refer to as corrosion. The corrosion process leads to the deterioration of metals through surface rust, pitting, and eventually the formation of holes. At the heart of it, corrosion is an electrochemical process.

Simply put, electrons are being transferred from one material

PVC Panels for Pig Farms. PHOTO COURTESY OF AGRICLE

PVC Panels for Pig Farms. PHOTO COURTESY OF AMERILUX

PVC Panel Tips for Agricultural Buildings

According to Buddy Pullen of Amerilux, a common solution when trying to avoid corrosion for agricultural building is PVC panels. They are generally bright white for a clean aspect, although they are available in many colors, and the ease of cleaning the surface makes them safer for humans and animals. Furthermore, if they are installed and maintained correctly, they can last as long as any building.

When installing PVC panels in a climate-controlled room, allow the PVC to acclimate for a few days, just as you would for hardwood flooring.

Be sure to follow manufacturer instructions and provide proper bracing.

If chemicals will be stored in the building, be sure to check the vendor's chemical compatibility list.

All plastic expands and contracts, so keep that in mind during installation, ensuring trims and joists have extra room to accommodate this expansion/contraction. One consequence of not leaving space for expansion can be oil canning (the panel can become wavy in appearance between improperly installed fasteners) when panels get warmer.

Avoid direct sunlight when storing these panels. At minimum, keep an opaque cover over the panels. Do not store them in a closed building without ventilation; high temperatures in these conditions can start to deform PVC panels. The maximum temperature that most PVC can tolerate is around 140 degrees.

www.amerilux.com

to another (the material that loses electrons is getting oxidized and the material accepting the electrons is getting reduced) and then a second chemical reaction is occurring with the new materials. If iron metal is getting oxidized, the iron is likely going to go from an oxidation state of zero (think no charge) to an oxidation state of 2 or 3 (think 2+ or 3+).

In this scenario, the iron is losing 2 or 3 electrons. The iron 2 or 3 (iron 2 is rapidly converted to iron 3 if oxygen is present) that is formed is highly reactive with oxygen and water, resulting in the formation of rust. The presence of acids will increase the amount of oxidation, as acids readily accept electrons, while the metal, in this case iron, is losing them.

Once that rust starts, it grows and keeps on going unless you intervene with removal or chemicals and, even then, it sometimes will continue. The main tool to combat steel corrosion is galvanizing. This is normally all that's needed for a building exterior, but in the case of a livestock building interior, galvanizing is likely to be insufficient. The reason for this is the acidity in animal urine.

Acids like those in urine can often react with metals, particularly iron, aluminum, zinc, and copper. For this reason, metal

panels have a hard and short life if used in certain parts of livestock buildings. The acids in animal urine will slowly eat at the zinc coating, exposing the steel under the galvanized coating and lead to rust through the previously mentioned process.

Aluminum, which can be a great choice for lots of building environments (strong, light, non-corrosive), is considered "non-corrosive" in most situations. But this isn't the case when that environment is a bit different. Normally, aluminum will form an oxide coating on its exterior that is quite stable, which protects the metal from deterioration, but this oxide coating is not durable in an acidic or basic environment. For this reason, aluminum isn't a good choice for some livestock building interior uses.

The acidic environment in and around livestock manure and urine will eventually eat away at aluminum. Aluminum may still have a place in livestock buildings, though, and that's for small-scale low-animal-density structures where the aluminum isn't in contact with manure. Windows in a low-density livestock building would be an example of a setting where aluminum would be a good choice, especially if it is coated or painted.

One could use stainless steel for livestock building interiors

Your Dream Building Starts with the Components.

MWI COMPONENTS TO BE EXACT.

800-360-6467

MWICOMPONENTS.COM

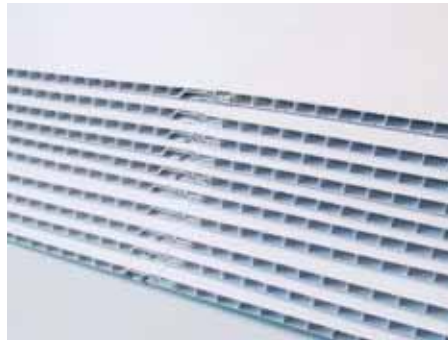

SPENCER, IA

PRODUCT FEATURE

(it would be beautifully shiny!), but that would be at great expense, and even stainless steel can corrode in the challenging conditions of a livestock building interior. Thus, what a customer wanting a livestock building really needs for the interior is something non-corrosive and a bit more cost effective. Since we need tough, durable, easy-to-clean material, but stainless steel is likely too expensive, we will have to look to some other materials for livestock building interiors. This is where materials like PVC and plastics come in, though stainless will still play a role for some fixtures and for fasteners.

Materials such as PVC, coated fiberglass, and various plastics can probably be used successfully in livestock building interiors. While materials like fiberglass, PVC, and other plastics don't corrode, they aren't the best materials for exterior use in many cases.

Amerilux Panels

UV light is often a catalyst for the degradation of these materials along with high temperature and mechanical stress. The good news here is that we are going to use these materials inside, so high temperature and UV are much smaller concerns than they would be for exterior use. Mechanical stress still remains an issue for the durability of these non-corrosive material, as livestock are always hard on things, but this would be no different for metal.

Proven Building Solutions.

DAYLIGHTING • WALL AND CEILING CLADDING

PALRAM PRODUCTS

For more than 60 years, Palram's commitment to quality has led to products that are durable and versatile with warranties that ensure your satisfaction!

SUNSKY®

SUNSKY is the leading corrugated polycarbonate product for skylights, sidelights, complete roofs, and cladding. SUNSKY has 20 times greater impact resistance than FRP, plus a lower yellowing index and the highest light transmission.

DURACLAD®

DURACLAD Multiwall Interlocking PVC interior wall & ceiling panels have a tongue-and-groove design allowing for quick installation. Chemical and water resistant. Available in bright white and NEW white shiplap Designer Series.

PALCLAD® PRO

These solid PVC wall cladding panels are a cost-effective alternative to FRP. PALCLAD PRO contains no fiberglass, has a 5-year warranty, and is Class A fire-rated. Also, chemical and water resistant.

To learn more, contact your local distributor or call 800-999-9459. Or visit us at: palram.com/us

So why do materials such as PVC, fiberglass, and plastic not corrode? Well, simply put, these aren't metals and are thus not going to be sensitive to oxidation and reduction reactions in the same way that metals are. The simplest explanation here is that metals are pretty free with electrons, as they allow them to move easily within the material (this is why they are good electrical conductors) while other materials may not.

Generally speaking, materials that aren't good conductors of electricity are good insulators (glass and ceramics would be in this category) and are also less likely to corrode. PVC, fiberglass, and plastics can certainly oxidize, but the conditions required for that to occur require a lot more energy and different conditions compared to metals like iron. Similarly, glass doesn't corrode, but it is probably obvious why a bunch of glass panels aren't used inside a livestock building.

Anyone who has been around animals knows that they sometimes chew on, bite, and even eat things that they shouldn't (I am looking especially at you goats!). With this in mind, it is important to make sure that things that might

Doors on Agricultural Buildings

Panels for animal confinement have to be tough to deal with everything animals can put them through, but doors can be a concern as well. Vicki Wachtendonk of AJ Manufacturing provided this checklist for finding the right door:

- Is this a door through which livestock will pass? If so, corrosion-resistant material is called for.
- Does the door need to be side or top hinged?
- Will internal reinforcements be needed? If hogs, sheep, or larger animals will pass through, you will likely want a reinforced door.
- Will transit guards be needed on the doors? For example, if a passageway is required to move hogs from one pen to another, a door may only open 90 degrees, and a transit guard can protect the door edge as well as the animals.
- Are door lites required?
- Will hardware attachments require reinforcement?
- Consider corrosion resistance of the hardware. Stainless steel is often the corrosion-resistant choice. Stainless steel titanium hinges are superior to plated steel for corrosion resistance.

PRODUCT FEATURE

get this sort of treatment from livestock aren't going to harm them if inadvertently ingested. While none of the materials mentioned (PVC, fiberglass, plastics) are advisable to ingest, they have been used in and around food and water for human and animal use for quite some time. But since you wouldn't eat them, it is probably wise to use the least potentially toxic where it might get chewed and others in places where that isn't as likely. Additionally, for the purposes of durability, it may be advisable to construct things in a way that minimizes or reduces access for chewing and biting these materials.

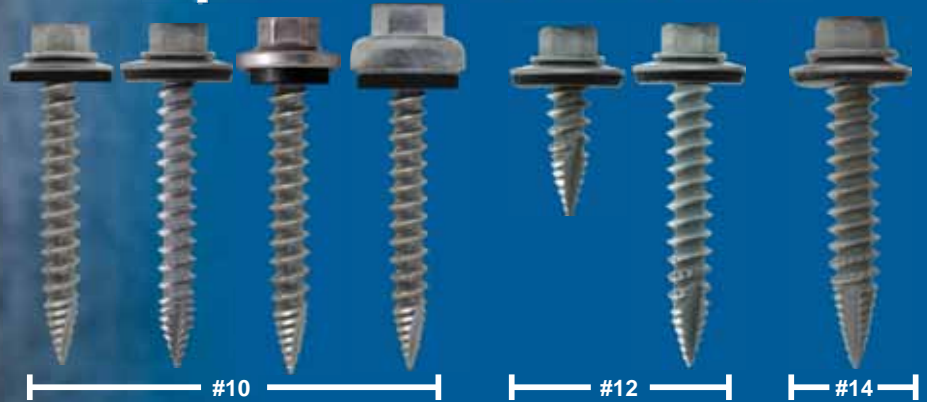

Quick thoughts here are that PVC and fiberglass would be great for windows. If windows are up and away from urine and manure, then aluminum frames can work well and may be cheaper and lighter than other options. PVC and fiberglass could also work well for doors. Stainless could be used here if the added strength and durability justify the expense. PVC and fiberglass can also be used for wall panels.

Plastics might make the most sense as dividers and panels amongst the livestock (maybe with stainless tubing around the

edges to deter the animals from chewing on them). Putting plastics where the animals might chew on them is probably OK, as many of these are the same types of plastic that we use for cutting boards and milk jugs; in other words, they are food safe. Plastics such as high density polyethylene (HDPE) are also more impact resistant than PVC (but also more expensive), so these may make the most sense for dividers.

One last consideration is that the corrosive environment in livestock buildings is not limited to the contact with manure and urine. The ventilation system is likely to encounter issues with corrosion as well. Some of the gases that will be vented (ammonia and potentially hydrogen sulfide) can react with moisture to create acids and then, when neutralized by reacting with surfaces, create salts, leading to corrosion in and around ventilation (whether passive vents or fans). Paying attention to these areas is important as well. Consistent removal of manure and urine, or consistent use of bedding, or both, can help reduce the formation and release of these gases and ensure the longevity of all parts of a livestock building. **RB**

Freudenberg Performance Materials LP

Booth #707

3500 Industrial Dr.
Durham, NC 27704
503-871-5806
info@dripstop.com
www.dripstop.com

For over 25 years, Dripstop® has been the absolute best way of dealing with condensation on non-insulated metal roofs. It has been tried and tested in every climate condition across the globe and has proven to be a simpler and more economical way. The membrane will absorb the water caused by condensation, thus preventing dripping from the roof. Dripstop® serves as an added layer of protection for the metal in corrosive environments while also improving inside and outside acoustic properties.

Dutch Tech, Inc.

Booth #521

107 Third Ave E
Lobelville, TN 37097
931-325-0000
office@dutchtechindustries.com
www.dutchtechindustries.com

We are proud to be an American owned and operated manufacturer located in Tennessee. Dutch Tech's Therma-Guard is America's new favorite reflective thermal insulation. With a super strong, woven backing, that's nearly impossible to tear, Therma-Guard's premium strength sets it apart from the competition. A 3mm foam core gives it thermal resistance to insulate your building, while the reflective metallized face reflects radiant heat, keeping your building comfortable in the summer and the winter.

Everlast Roofing, Inc.

Booth #410

10 Enterprise Court
Lebanon, PA 17042
888-339-0059
717-270-6569 (fax)
marketing@everlastroofing.com
www.everlastroofing.com

For more than 20 years, Everlast Roofing, Inc. has continued to push the metal building component industry forward, leading to the creation and introduction of CECL® and Heat Forming. Understanding how essential quality roofing and siding is to your structure, Everlast shapes their steel roofing with laboratory-tested technologies such as AZM® with Activate Technology. These technologies allow for a self-sealing, protective barrier in the most vulnerable spots, such as scratches and cut edges, while providing a superior paint system tested in some of the harshest regions and formulated against the weather. It is easy to see why Everlast Roofing, Inc. continues to be the most innovative on the market.

Post-Frame Builder Show

PO Box 255
Iola, WI 54945
920-216-3007 - Missy Beyer
missy@shieldwallmedia.com
www.postframebuildershow.com

Post-Frame builders face the same business needs and challenges. Our First Annual Post-Frame Builder's show is all about resolving them. We're bringing together the suppliers, industry leaders, and technological solution providers in one space. Come mingle with the experts, shop for solutions, and make connections in Branson, Missouri, June 19-20.

Post Protector, Inc.

Booth #100

PO Box 187
Pottsville, PA 17901
570-624-7030
570-624-7031 (fax)
ken@postprotector.com
www.postprotector.com

Post Protector is a slide-on barrier system, delivering serious post-decay protection. Post Protector tackles post longevity concerns by eliminating both soil/concrete-to-post contact and chemical migration. Post Protector retains the simplicity, affordability, speed and strength of typical post-in-ground construction techniques. Horizontal perimeter ribs, in conjunction with provided hardware, yield substantial post uplift protection, and best of all, installation is a snap. It's simple: By keeping soil out and treatment in, Post Protector dramatically improves post-frame foundations.

Red Dot Products

Culture is Everything

Amerilux Follows Their Playbook For The Win.

Sometimes you realize that if you want to make your dreams come true, it's now or never. In 2004, in collaboration with Jon Voss and Tami Churchill, Kurt Voss started on a new venture. Kurt had always dreamed of owning his own business, and he decided it was time.

The company began with three people, and a dearth of working capital for growth and navigating the challenges of adding people. Kurt said that really throughout the growth of the last 20 years, people have been the main challenge, and challenges are what business is all about. Yet, the company now has 230 employees, and Kurt (Jon and Tami have since retired) is proud of the team they have assembled.

SO IF PEOPLE ARE A CHALLENGE... HOW DID THEY GROW?

Amerilux believes it comes down to culture. They have a "How We Succeed Together" document that lays it all out. Their "mandates" include:

- **Make a Play!** The company culture says that team members

are predisposed to take reasonable action, knowing that they will make mistakes along the way, but preferring that to allowing outside influences to determine their path.

- **Don't Confuse Activity with Results.** Activity is judged based on the meaningful results it produces.
- **Conflict is a Good Thing!** Conflict is communication and often as team members discuss what the "right thing" is to do and the "right way" to do it, new ideas are born.
- **We Don't Drink Our Own Kool-Aid.** This means that

successes are handled with humility. False paradigms are avoided so that new ideas and information are not shut out.

• **Don't Judge People on Their Worst Moments!** "In the pursuit of excellence, we never lose our human compassion. We look for the overall pattern of good in people, and encourage people to succeed by playing to their natural strengths."

Other important concepts play their part in this intentional culture, but above all, the team is committed to a Win/Win framework, believing that "Every sustainable relationship, personal and professional, must be based on win-win for all parties. We invest in creating wins for all stakeholders in AmeriLux: employees, investors, customers, vendors, and the community." That seems like a pretty strong playbook.

Not only does such a positive culture create a better environment for everyone, it makes it easy for employees to know

what is expected of them in their actions and communications, allowing them to focus on other things. It also helps the company develop a reputation that is attractive to people looking for an opportunity.

AmeriLux International Warehouse

HOW DOES THIS WORK?

Naturally, it is easy to make up guidelines and hope it makes things better, but Voss says, it doesn't work that way. These statements are part of every interview with employees, whether it's a job interview or a performance review, and it is incorporated into meetings and used to ensure that the team remains true to their values.

The other piece of how this works is that the culture not only attracts people who want to work at winning, it nurtures that kind of drive. Voss said, "When you have a big team all chasing potential, you need to offer a bigger track for them to run on." Growth becomes an inherent part of work.

Millersburg, OH 44654 F: (330) 674-4035 acuformequipment.com

WHAT DOES AMERILUX DO?

With the kind of cultural commitment the company exhibits, it's almost unimportant what product or service they produce. Voss said that if they made potato chips, they would be successfully making some of the best potato chips out there.

However, Amerilux's customers are glad that they distribute plastic sheeting including polycarbonate and PVC in various profiles, plus acrylic, HDPE, and related accessories. They serve all markets in the construction industry as well as some manufacturers.

Amerilux is also a manufacturer of window wells and Shape Products, thermal forming and compression molding. The company is adding a new product to their lineup: DuxxBak, composite decking.

Kurt Voss, CEO

They consider themselves a value-added supplier; they talk to the customer to see what they need, doing some pieces of the prep work, fabrication, and assembly for customers where they can. As per their cultural directive, they are always striving for the win/win. From their headquarters in DePere, Wisconsin, the team ships supplies across America and Canada.

WHERE SHOULD A COMPANY START?

Voss's advice to people starting out in the industry, or any industry: "Find the value proposition that resonates in your market. Make sure you have working capital to fund your big ideas, to nurture them, and to get to the finish line. Finally, remember, you are in the people business... you're ALWAYS in the people business," he added. **RB**

What's New in Post-Frame

Exhibitors, attendees enjoy annual Frame Building Expo in Des Moines

For the better part of a week, Iowa was the hub of the post-frame industry. Frame Building Expo (FBE), sponsored by the National Frame Building Association, was held March 6-8 in downtown Des Moines at the Iowa Events Center.

The event hosted more than 160 exhibitors on the Expo floor. Several attendees polled said their most important objective was to find new products. If you missed the event but would like to learn about some of the products debuted in Des Moines, read on.

NEW PRODUCTS

Component manufacturer Plyco debuted some new innovations, which included its Designer Series doors — Series 92 and 20 — that are now available in several new colors, with textured panels, and with several frame colors. Plyco reported: “Customers can now choose from the various panels and frames to customize their doors.” Also, the Klik-Fit Trim Kit is a new addition to Plyco doors to “help create a stylish, finished look after installation.”

About the show, they said, “Overall, it was a great show. We had wonderful attendance in the booth looking at the new innovations and were able to have great conversations with current and prospective customers.”

Keith Dietzen shared an exciting project that SmartBuild currently has in development. “SmartBuild’s big deal was to show off our software Release 1.90, which will be used to design two levels of interior living space in a barndominium.” It was very well received; people had a strong interest in it.

Coming in 2024, SmartBuild is developing a software version for building design people. “After we came out with

The Rapid Framing System once again drew the attention of attendees.

the 1.90 barndominium-specific release that can lay out the bath, kitchen, and other details,” Dietzen said, “we found we started to get inundated with inquiries from building designers. (Before, it was for builders and contractors.)” During the inquiries, the building design people said the tools they were using weren’t efficient in designing post-frame structures. “We did a deep dive with these people,”

Dietzen continued. “The tools that they have to generate a full set of drawings for a barndominium customer takes 10 to 20 hours. When they use SmartBuild, it has all the details including structural details. Building designers are saying it’s valuable the way it is, but we will be doing more. ... Once it’s fully developed, SmartBuild for building designers will take a 10- to 20-hour task and boil it down to less than 2 hours.”

Ultimately, a project will be able to go from design to price within the same day, he explains. The company will have some initial releases within the next 60 days, and then will be rolling out regular updates. “We’re going to connect the whole post frame industry to the architectural design community.”

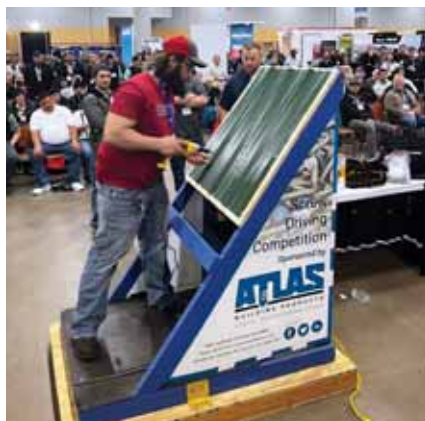

Post-frame building and metal roofing supplier True Metal Supply exhibited at FBE for the first time this year. The company’s booth featured its post-frame buildings with Buffalo River Truss’ Parallel Chord Steel Trusses, as well as its Board & Batten Steel Siding with various Wood Print Coatings. “The steel trusses drew a lot of attention, as a hybrid building style. Many show attendees were intrigued by the 100’ clear span capabilities and ease of installation.” The company also reports its new Wood Print Coatings on its Board & Batten Steel Siding attracted both influencers and builders in the industry. “We expect these building components to continue growing over the course of 2024.”

The company also reported that in 2024, Sweat Shield™ condensation control will be a new focus. It creates a lasting barrier between the building’s metal envelope and the harmful effects of condensation. “This material is pre-applied to True’s Through Fastened Tuff-Rib panels and is designed for buildings with interior, exposed metal roofing.”

They said they “had an excellent experience, as we received quality leads and reconnected with industry partners. We’re excited to have the show in our home town, Knoxville, in 2025!”

Hixwood’s Paul Zimmerman said, “I always enjoy the NFBA show, with Iowa being in our core area. It was a very productive exhibit for our team. The seminars were very informative, I wanted to give a shout out to the barndominium seminar. This has great growth potential for the post-frame industry.”

Regarding Hixwood’s sponsorship of the Family Lounge, Zimmerman said, “With God and family first in our lives at Hixwood, it is natural for the company to sponsor the family lounge. A mother with

children that accompanied her husband to the show said, ‘I wonder if they realize how much this area is appreciated?’ It made it worthwhile, and I am hoping someday the children playing in the family lounge area will be leaders in the post-frame industry that we love so well.”

In addition to its standard line of tools, including the Ridge R-3:10 and the Ridge R-9, the County Line Concepts exhibit featured some new tools, including The Ceiling Panel Support for holding panels close to the ceiling for installation. Also shown were the Ridge R-Awl, used to give accurate marks on the panels, and the Mega Bracket, which sits over the rails on a mega deck and keeps materials and equipment off the floor. The Post Plummer, which allows for adjustment of the posts for a final, accurate alignment and the Pole Cat and Wall Lifter (used with your equipment to raise posts and walls into place) were also exhibited.

“The exciting part of our business is talking with contractors and getting ideas of what they are looking for and then bringing them to the table,” said County Line Concepts’ Gordon Moeggenborg. “We are always open for your input.”

Metal shear manufacturer Integrity Sales & Service, maker of the Dyna-Cut shared a bit of news. While the company didn’t debut any new products at the show, they do have some exciting tools in development. Keep watch for future announcements.

It was standing-room-only around the Maze Nails nail driving competition.

CROWD FAVORITES

A large crowd gathered around to watch the always-popular nail-driving competition, which was once again sponsored by Maze Nails of Peru, Illinois. A total of 47 contestants stepped up to compete. “We timed each contestant on how quickly they could drive three 40d (5-inch) Hardened Ring shank Pole Barn nails into a LVL Microlam Beam,” explained Len Kasperski of Maze Nails. “The nails were preset into the beam 1/2 inch for safety reasons. Each contestant raced against the clock to see who could drive all three flush to the surface the quickest. This was our 20th annual Nail Pounding Competition.” When the results were tallied, Joshua Gingrich came in with the fastest time of 8.75 seconds, earning him first place. The second and third place finishers, respectively, were Vernon Borntreger at 8.87 seconds and Eddie Conrad at 9.85 seconds.

Atlas Building Products once again sponsored the Screw Driving Competition. Three-man crews stepped up to drive 1” Woodtite fasteners into 29-ga. ag panels using a DeWalt 268 screw gun. “The winning team was Countryside Metals with a three-man team time of 43.7 seconds,” reported company spokesperson Amanda Edwards. “Coming in second was Timbercrest construction with a time of 47.52 seconds. The fastest individual was TJ Mast with a time of 13.2 seconds.”

Looking ahead, next year’s event takes place a little later in the year; the 57th Annual Frame Building Expo & Conference will be held April 2-4, 2025, in Knoxville, Tennessee. **RB**

RB MAY 2024

Rural Builder Construction Diversity Provides Insight Across Markets

We are currently wrapping up the CSI — Annual & Market Report. We are running a little behind; new projects always do, but look for the report to land, free of charge, in your mailbox late May or early June.

Rural Builder is unique among our publications because it covers the widest range of construction styles and markets.

Virtually all the respondents involved in agricultural construction build for other market segments as well.

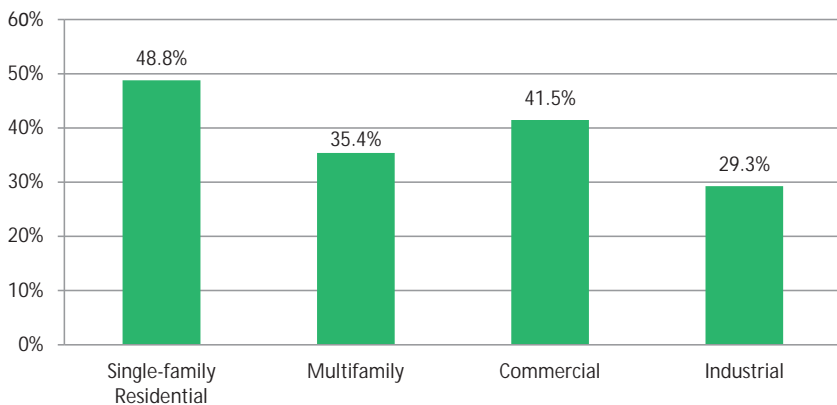

This provides an opportunity to compare across different segments, which highlights some similarities and emphasizes some differences.

Multifamily predicted the greatest increase in job size, with 58.1% looking at an increase. Agricultural had the smallest number predicting an increase in job size (42.7%) and the largest predicting smaller project size (15.9%).

Another area of contrast is how different segments view what new technology will impact the markets.

Technology and job size also correlate to other factors such as Gross Sales and New vs. Remodel. Larger project sizes would be more noticeable in companies building more and larger build-

Companies Who Build in Agricultural Market, Work in other Markets

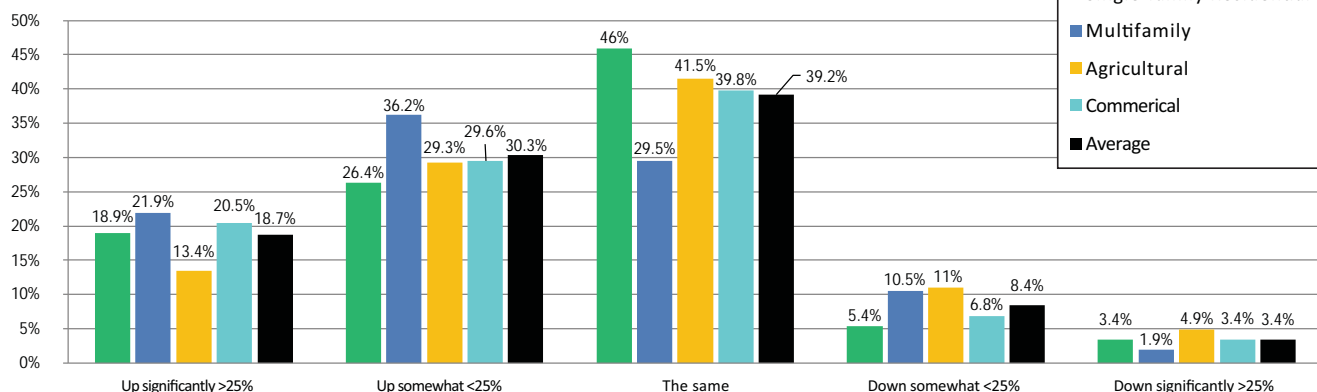

ings. And technology and increases in size would be more impactful in regard to new construction.

Look for a more detailed look in the CSI — Annual and Market Report mailing to you in Q2. **RB**

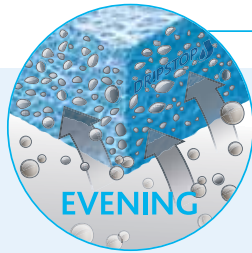

If you like the CSI columns or find the information useful, help us help you. Shield Wall media sends a State of the Industry Survey in fall and a mid-year State of the Industry Survey in Spring.

Projected Average Job Size

CONDENSATION CONTROL WHICH INCREASES PROFITS NOT LABOR COSTS

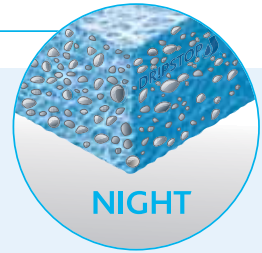

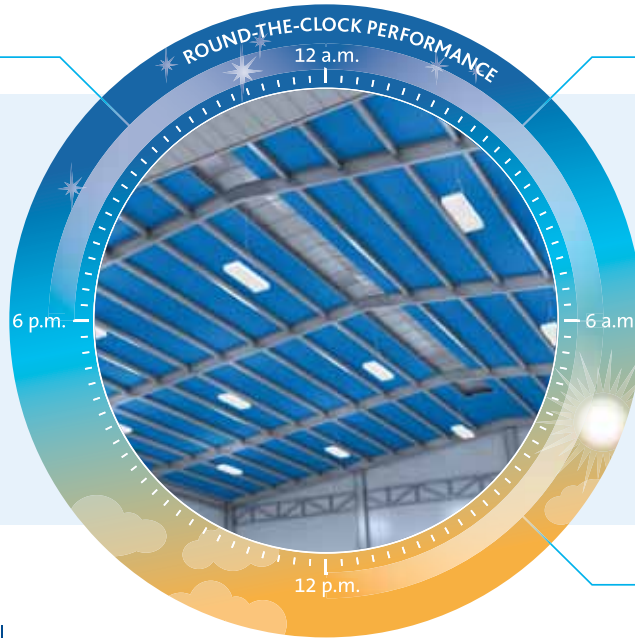

EVENING

Wet air rises up to the cold metal roof with Dripstop®

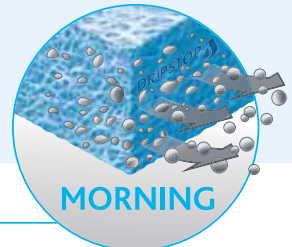

DRIPOSTOP®

Effective condensation control requires good building ventilation

NIGHT

Moisture is trapped in the air pockets of the membrane

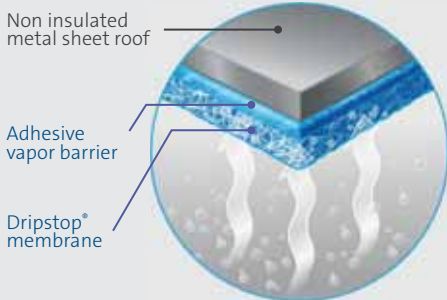

MORNING

Water evaporates and is vented out through the roof

A Necessity for Any Metal Roofed Building That is Not Climate Controlled.

- Post Frame/agricultural buildings
- Workshops/unattached garages
- Steel buildings
- Open-walled structures
- Self-storage
- Carports, truck ports & RV storage

Better Science Equals Drier Buildings

When condensation occurs, moisture gets stored in the specially designed pockets of the Dripstop® membrane.

- Helps fight corrosion in livestock confinement
- Arrives on-site already on roof panels
- Cuts construction time in half
- Saves money
